1.2 About this manual

Objective and contents This manual describes the Touch Panel 62K-JID0-... from VIPA. It contains a description of the structure, project engineering and deployment.

| Product | Order number | as of state: | |
|-------------------------|--|------------------|-----------------------------------|
| | | HW | BS |
| TP 610C | 62K-JID0 | 01 | Windows [®] CE 6.0 Prof. |
| Target audience | The manual is targeted tion technology. | l at users who h | ave a background in automa- |
| Structure of the manual | The manual consists of chapters. Every chapter provides a self-con- tained description of a specific topic. | | |

| Guide to the document | The following guides are available in the manual: An overall table of contents at the beginning of the manual References with page numbers | | |
|-----------------------|--|--|--|
| Availability | The manual is available in: printed form, on paper in electronic form as PDF-file (Adobe Acrobat Reader) | | |
| Icons Headings | Important passages in the text are highlighted by following icons and headings: | | |
| | DANGER! Immediate or likely danger. Personal injury is possible. | | |
| | CAUTION! Damages to property is likely if these warnings are not heeded. | | |
| | Supplementary information and useful tips. | | |

1.3 Safety information

Applications conforming with specifications The Touch Panels are constructed and produced for:

- VIPA CPUs 01x, 11x, 21x, 31x, 51x and S7-300/400 from Siemens
- communication and process control
- industrial applications
- operation within the environmental conditions specified in the technical data
- installation into a cubicle

DANGER!

This device is not certified for applications in

in explosive environments (EX-zone)

Documentation

The manual must be available to all personnel in the

- project design department
- installation department
- commissioning
- operation

CAUTION!

The following conditions must be met before using or commissioning the components described in this manual:

- Hardware modifications to the process control system should only be carried out when the system has been disconnected from power!
- Installation and hardware modifications only by properly trained personnel.
- The national rules and regulations of the respective country must be satisfied (installation, safety, EMC ...)

Disposal

National rules and regulations apply to the disposal of the unit!

2 Hardware description

2.1 Safety information for users

Handling of electrostatic sensitive modules VIPA modules make use of highly integrated components in MOS-Technology. These components are extremely sensitive to over-voltages that can occur during electrostatic discharges. The following symbol is attached to modules that can be destroyed by electrostatic discharges.

The Symbol is located on the module, the module rack or on packing material and it indicates the presence of electrostatic sensitive equipment. It is possible that electrostatic sensitive equipment is destroyed by energies and voltages that are far less than the human threshold of perception. These voltages can occur where persons do not discharge themselves before handling electrostatic sensitive modules and they can damage components thereby, causing the module to become inoperable or unusable. Modules that have been damaged by electrostatic discharges can fail after a temperature change, mechanical shock or changes in the electrical load. Only the consequent implementation of protection devices and meticulous attention to the applicable rules and regulations for handling the respective equipment can prevent failures of electrostatic sensitive modules.

Shipping of modules

Modules must be shipped in the original packing material.

Measurements and alterations on electrostatic sensitive modules When you are conducting measurements on electrostatic sensitive modules you should take the following precautions:

- Floating instruments must be discharged before use.
- Instruments must be grounded.

Modifying electrostatic sensitive modules you should only use soldering irons with grounded tips.

CAUTION!

Personnel and instruments should be grounded when working on electrostatic sensitive modules.

2.2 Properties General

The VIPA Touch Panel allows you to visualize and alter operating states and recent process values of a connected PLC. The Touch Panel is a compact and modular embedded PC based on Windows[®] CE. Besides the extensive Windows[®] CE functions the Touch Panel offers varied communication possibilities. Here the Touch Panel can simply be configured, controlled and remoted.

- Windows[®] CE 6.0 Prof.
- 62K-JID0-CB: Movicon 11 CE Standard (4096 I/O bytes)
- Processor Xscale, 1.1GHz
- Work memory 256Mbyte
- User memory 512Mbyte
- 380Mbyte memory for user data
- CF-Card II and MMC/SD card slot
- RS232, RS422/485, MPI, PROFIBUS DP slave, Ethernet, USB-A and USB-B interfaces
- Robust aluminium die casting case
- Display SVGA 800 x 600 / 600 x 800 (16M colors)
- Battery backed clock
- Resistive touch screen
- Easy mounting via integrated pivoted lever
- Protection class IP65 (frontal)

Order data

| Туре | Order number | Description |
|---------|--------------|--|
| TP 610C | 62K-JID0 | 10.4" SVGA, TFT color, MPI/PROFIBUS DP/RS485, RS232, RS422/485, 2xUSB-A, USB-B, 2xEthernet RJ45 (Switch) |

Structure > Overview

2.3 Structure

2.3.1 Overview

Front view

- 1 Slot for storage medium (CF, SD/MMC)
- 2 Connection for interfaces and power supply
- 3 Display with touch sensitive area (touch screen)

Side view

- 1 Compact Flash
- 2 MMC / SD

Structure > Interfaces

Please make sure that the Touch Panel always has to be supplied with external voltage!

2.3.2 Interfaces

RS422/485 interface

9 pin SubD jack

- Logical states represented by voltage differences between the 4 cores
- Serial bus connection in 4-wire technology using full duplex mode
- Data communications up to a max. distance of 500m
- Data communication rate up to 115.2kBaud

Serial bus connection in 2-wire technology using half duplex mode

Structure > Interfaces

RS232 interface

9 pin SubD plug

- Interface is compatible to the COM interface of a PC
- Logical signals as voltage levels
- Point-to-point links with serial full-duplex transfer in two-wire technology up to 15m distance
- Data transfer rate up to 115.2kbit/s

MPI/PROFIBUS DP interface

9 pin SubD jack

| Ethernet connection | An RJ45 jack provides the interface to the twisted pair cable, required for Ethernet. |
|---------------------|---|
| "Host"-USB-A | Using the "Host"-USB-A interface USB mouse, keyboard, stick or USB hard discs can be connected. |

For project transfer with Microsoft ActiveSync a programming cable can be connected using the "Slave"-USB-B interface. The USB-A interface of your PC can be connected to the "Slave"-

USB-B interface of your Touch Panel deploying the USB programming cable.

The USB programming cable is delivered by VIPA with order No. 670-0KB10.

"Slave"-USB-B

| Power supply | The Touch Panel has got an integrated power supply. The power supply has to be provided with DC 24V (20.4 28.8V). For this you find an according DC 24V slot on the bottom side. The power supply is protected against inverse polarity and overcurrent. The battery for the clock of the Touch Panel is an accumulator with a suitable charging circuit. This accumulator is maintenance-free and does not need to be exchanged within the life span of the Touch Panel. |
|----------------------|--|
| 2.3.3 Memory managen | nent |
| Overview | The following memory systems are available for every Touch Panel: 256Mbyte work memory 512Mbyte user memory (ca. 380Mbyte for user data) USB storage media connected via "Host"-USB-A interface Slot for CF (Type II) Slot for MMC/SD |
| | Please only use memory cards formatted with FAT(32)! |
| Work memory | Every Touch Panel has a work memory with a size of 256Mbyte. The work memory is not buffered and is deleted after shut down. Please consider that also registry entries are stored in the work memory that are set back to default settings after the next re-boot. You can save them permanently by means of the <i>KuK Tools</i> (within consignment). |
| User memory | As internal permanent storage medium every Touch Panel has a flash disc with a size of 512Mbyte (about 380Mbyte user data). After the start of Windows [®] CE this memory is listed as <i>Flashdisk</i> under <i>My Device</i> . |
| USB storage media | The connection of USB sticks and USB drives by use of the "Host"- USB-A interface is supported by the Touch Panel. After connection the storage media is listed as <i>Hard Disk</i> under <i>My Device</i> . |
| Slot for CF | |
| | Here you can plug a CompactFlash [®] type II. The card may be plugged and removed during runtime and is immediately listed as <i>Storage Card</i> at <i>My Device</i> . Every CompactFlash [®] storage module has a pulling edge. Hold the CompactFlash in the way that the pulling edge points to the left side. Push the storage module without much power into the slot until the impact. To remove the card touch it at the pulling edge and pull. |

Slot for SD/MMC

On this slot you can plug storage modules of the type SD or MMC. The card may be plugged and removed during runtime and is immediately listed as *SDMMC Card* at *My Device*.

Please take care to plug the according card as shown on the back of the Touch Panel.

Dimensions

Security flap for memory cards

On the left side of the Touch Panel are the card slots for memory cards. The cards are visibly covered by a security flap and are thus secured from slipping out.

Please take care to pull the security flap back before plugging or pulling a memory card like shown in the illustration and put it back again afterwards. When plugging, the security flap additionally snaps into position above the plugged memory card.

2.4 Dimensions

Installation dimensions For the installation of the Touch Panel in control cabinets and desks the following dimensions are necessary:

| 10.4" - 62K-JID0 | Front panel width | 1.5 6mm |
|------------------|------------------------------|------------------|
| | Installation cutting (W x H) | 287 x 217mm |
| | Front panel (W x H) | 304 x 233mm |
| | Rear panel (W x H x D) | 285 x 215 x 45mm |
| | Installation depth | 45mm |

The degrees of protection are only guaranteed when the following is observed:

- Material thickness at the mounting cut-out: 1.5 ... 6mm
- The deviation from the plane for the panel cut-out is ≤ 0.5mm. This condition must be fulfilled for the mounted HMI device.
- Permissible surface roughness in the area of the seal: $\leq 120 \mu m$ (friction coefficient 120)

General data

2.5 General data

| Conformity and approval | | |
|-------------------------|-------------|---|
| Conformity | | |
| CE | 2006/95/EG | Low-voltage directive |
| | 2004/108/EG | EMC directive |
| Approval | | |
| UL | UL 508 | Approval for USA and Canada |
| others | | |
| RoHS | 2011/65/EU | Product is lead-free; Restriction of the use of certain hazardous substances in electrical and electronic equipment |

| Protection of persons and device protection | | | | |
|---|---|-----------------------------------|--|--|

3 Deployment Touch Panel

3.1 Installation

Overview

The Touch Panel is suitable for the installation in operating tables and control cabinet fronts. The installation happens via the back. The Touch Panel is provided with a patented integrated fixing technique that allows an easy connection with a simple screwdriver.

Due to the fact that the Touch Panel has a plug connector for bus connection and voltage supply, a fast and easy device change is possible.

Installation cutting

For the installation into a operating tableau and control cabinet fronts, the Touch Panel requires the following front plate cutting:

| Touch Panel | W x H in mm |
|-------------|-------------|
| 62K-JID0 | 287 x 217 |

Installation

The fixing technique is integrated in the casing of the Touch Panel and accessible via the back. For the installation, a small slit screwdriver is required

- **1.** Push the operator panel [3] from the front side into the front panel cutting [1] until it touches the panel with the seal [2].
- **2.** Now bolt the lever [5] clockwise with the screwdriver [4] until it rotates to the outside.
- **3.** Further screwing bolts the lever to the front panel until it holds this to the control cabinet front.

Installation

Connect power supply

For the cabling of the DC 24V power supply green plugs with Cage-Clamp technology are deployed. The spring-clip connector technology simplifies the wiring requirements for signaling and power cables. In contrast to screw terminal connections, spring-clip wiring is vibration proof.

Here also you can connect wires with a cross-section of 0.08mm^2 to 2.5mm^2 . You can use flexible wires without end case as well as stiff wires.

Fix the conductors to the CageClamps like this:

- 1 Round opening for wires
- 2 Locking (orange) for screwdriver
- 3 Test point for 2mm test tip

The picture on the left side shows the cabling step by step from top view.

- **1.** For cabling you push the locking vertical to the inside with a suiting screwdriver and hold the screwdriver in this position.
- **2.** Insert the insulation-stripped wire into the round opening. You can use wires with a cross-section from 0.08mm² to 2.5mm².
- **3.** By removing the screwdriver the wire is connected safely with the plug connector via a spring.

3.2 Commissioning

CAUTION!

- Before commissioning the device must be brought to room temperature.
- At condensation the device must be absolutely dry before connected to power.
- To avoid overheat during operation the device must not be laid open to direct sun light.
- After opening the control cabinet or desk, there are parts with possible dangerous voltage available.
- For all signal connections only screened cables are permitted.
- Signal cables must not be let within the same cable shaft as high voltage cables.

3.2.1 VIPA Startup-Manager

As soon as the Touch Panel is provided by power supply, the *VIPA Startup-Manager* will be loaded.

Start screen At the first startup of the *VIPA Startup-Manager* the following *start screen* appears.

There is a button on the *initial screen* with a counter, which counts backwards. If you click on this button within this time, the project will start. If the time expires, the project will start automatically. With the button *'Main'* you get to the *selection menu*.

A delay time of 5 seconds is default. In the *selection menu* under "Autostart" you can adjust this time.

Selection menu

There are following buttons in the selection menu:

- Settings
- Info/Update
- Autostart

Commissioning > VIPA Startup-Manager

- Backup
- Exit
- Back

Settings In [Settings] under Change Settings you can set a password for the Startup-Manager. The password will be requested when interrupting the start countdown or before closing the Startup-Managers by "Exit". By default, no password is defined. In Control Panel [Open...] the system settings like brightness of the display can be preset or the display can be re-calibrated. Here the MPI/DP slave interface may also be configured. Further you get here the Touch Panel information: product number, serial number and licenses.

Info/Update (firmware) To execute the firmware update press the button [Info/Update]. After clicking on [Info/Update] the current image is displayed under "Panel Information" with panel name, creation date and version number.

With [Create Screenshot] you can make a screen shot of the panel information and select a destination for its storage.

With [Search Image] a list of all the firmware images is shown, which are available on the panel and connected storage media. These images will be listed with create data and version number. Choose your new image.

If the selected image is not correct for your panel, an error massage will appear. If the image is correct for your panel, in the following message the current installed image version and the new selected image version will be listed.

- **1.** Click on [Update Image] to execute the update. This can take a few seconds.
 - ⇒ After successful update the Touch Panel restarts automatically.

After the restart the calibration window opens.

- **2.** Re-calibrate the panel as described. After calibration tap anywhere on the screen.
 - \Rightarrow The calibration window closes.

To remain the settings permanently, they have to be saved with **KuK Tools** [Store].

Autostart

With [Autostart] you define which runtime and which project will be started automatically together with the panel startup.

Commissioning > VIPA Startup-Manager

| Runtime Start | | | | | | |
|-------------------------------------|--------|----------|---------------------|--------|--------|------|
| Runtime Path | | | | | | |
| VFlashdisk\MovCE\MovCE.exe[11.4.1 | 150.3] | | | | | |
| Project Path / Parameter | | | | | | |
| \Flashdisk\Movproj\SIM3\sim3.movprj | | | | | | |
| Delay Time [seconds] | | Rotation | | | | |
| + 5 | - | •• | O 90° | O 180° | O 270° | |
| Program Start | | | | | | |
| Name Action | | | | | | |
| | | | | | + | Edit |
| | | | | | | |
| | | | | | _ | |
| | | | | | | |
| Autostart | | | | | |] |
| | | | | | | |
| VNC Server | | | Autostart VipaStart | Jp | | Back |
| Movicon TCP Upload Server | | | | | | Dack |

With [...] under "Runtime path" res. "Project path" all existing runtimes res. projects on the panel and the storage media are listed.

If the panel should start with a project of the web visualization of the VIPA SPEED7 Studio, you have to select a batch file with [...] under "Runtime path" *Enter manually* → *Flashdisk'*. For this, select under "Type" *all Files* and select one of the following batch files:

- Start VIPA Webbrowser.bat
- Start VIPA Webserver and Browser fullscreen.bat
- Start VIPA Webserver and Browser.bat
- Start VIPA Webserver.bat

Under "Delay Time" you can adjust a delay time > 0 by using the buttons [+] and [-]. 5 seconds are default.

Via "Rotation" the orientation of the panel can be changed.

Via "Program start" with [+] you can add programmes, which have to start automatically.

| 1. Program name | | |
|------------------------------------|------|--|
| ⊖ copy ● start <i>Program name</i> | | |
| Cancel | Next | |

1. Select "start" and assign a name for the program.

Deployment Touch Panel

Commissioning > VIPA Startup-Manager

| 2. Source Path | | | | | | | | | |
|------------------------------------|------|--|--|--|--|--|--|--|--|
| \SDMMC Card\VIPA Tools\AddFont.exe | | | | | | | | | |
| Back | Next | | | | | | | | |

2. Upload your program with [...].

| 3. Parameter (optional) | | | | | | | | |
|-------------------------------------|--|--|--|--|--|--|--|--|
| \SDMMC Card\VIPA Tools\SIMFANG0.TTF | | | | | | | | |
| Back Finish | | | | | | | | |

3. You can optionally set parameters.

4. Exit with [Finish].

With "Copy" [...] you can copy Windows $^{\mbox{\tiny (B)}}$ CE files on the panel from a source path to a destination path.

With "Autostart" you can select the automatic startup of the VNC server, the Movicon-TCP upload server resp. the Startup-Manager. With [Back] you get back to the *select menu*.

Backup By default, the configuration of the Startup-Manager, the registry settings for the backlight, the local settings and the LAN settings will be saved by [Backup] in '*Flashdisk* → *Backup*'. The name of the backup file is "backup.bkv". Which settings will be saved and the storage location are defined in the file "ToDoList.xml" under '*Flashdisk* → *VipaStartup*'. These can be adjusted accordingly.

Exit The VIPA Startup-Manager will be closed by [Exit] and the system returns to the Windows[®] screen.

Back With [Back] you get back to the start screen of the VIPA Startup-Manager.

3.3 Connection to a PLC system

For the inclusion into your PLC system several HMI/SCADA projectengineering platforms are at your disposal that has to be installed at an external PC. Here you may create your project, where appropriate simulate it and transfer it to the Touch Panel via a connection that you've entered before. Via the at the Touch Panel pre-installed runtime version of the HMI/SCADA project engineering platforms your project is run able.

By using the according communication driver, the Touch Panel supports connecting options to the PLC via field bus and Ethernet.

During operation your operating device communicates with the according PLC and reacts to the application courses in the PLC according to the configured processes. Via dialogues configured before, process values may be monitored graphically, altered and evaluated.

3.4 Operating system Windows[®] Embedded CE 6.0 Prof.

3.4.1 General

The newly developed standard Windows[®] CE allows devices that are communicating with each other to exchange information with Windows[®] based devices and to establish connections to the Internet. Microsoft Windows[®] CE is a 32bit, open and scalable platform for a multiplicity of communication and data processing devices. The functions like multi-tasking and multi-threading are supported by this operating system.

Operating system Windows® Embedded CE 6.0 Prof. > General

| Windows [®] Embedded CE 6.0 | Windows [®] Embedded CE 6.0 supports some file viewer and an Internet browser. |
|--|--|
| Properties | ftp, http, Telnet and VNC server RAS server ActiveSync file transfer (USB, RS232) RDP (Remote Desktop Protocol) Internet Explorer 6 Registry Editor WordPad Mouse pointer USB keyboard driver HP printer driver (COM, Ethernet, USB) File viewer for Word, Excel, PowerPoint and PDF VIPA Startup Manager |
| Differences to the standard Windows [®] operation | Please regard that for the deployment of Windows [®] CE a thorough knowledge of operating Windows [®] are assumed. Here are only shown the differences to a "standard" Windows [®] operating system. |
| Pen entry | You're operating the Touch Panel by means of a pencil res. with the finger. When touching an area at the touch screen this area is recognized and the program reacts accordingly. The following types of entry are differentiated: Double click A double click has to be executed like mouse operation by touching the area at the screen twice. A double click on an object opens res. executes this. Drag By tapping on an object and then dragging you can move the object on the screen. If no object is selected, a frame is created by the dragging that selects the touched objects. Characteristics with Windows® Embedded CE 6.0 In this version mouse functions are fully supported. As soon as the touch screen is touched with the pen, a mouse pointer is shown on the desktop at the pen position. |
| Navigation within the dialog window | The windows can be moved via the head bar. Here you can also find the [OK] button to confirm entries and the [X] button for exiting the dialog. |
| Exit Windows® (shut down) | You can not exit Windows [®] . By switching the power supply off and on again you can restart Windows [®] . Before a reboot you should always save your data res. close all running applications to avoid data loss. $ \begin{array}{c} & \\ & \\ & \\ & \\ & \\ & \\ & \\ & \\ & \\ & $ |

Operating system Windows® Embedded CE 6.0 Prof. > Structure

3.4.2 Structure

| 1 | lcon | Via icons on the desktop you gain direct access to the application related to the icon. |
|---|----------|--|
| 2 | Desktop | The desktop is the screen that is shown after login to Windows [®] CE. It contains e.g. links to the mostly used applications res. system components. |
| 3 | Task bar | The task bar is part of the desktop. When opening an application, a document or a window, every running object is displayed as button on the task bar. Via this buttons you can easily change between the open windows. |

| Task bar | 💦 Start | 🗁 Program Files | Command Prompt | | 🕹 EN | 8:03 AM | B | |
|----------|---------|-----------------|----------------|---|------|---------|----------|---|
| | | | | | | | | |
| | 1 | | 2 | 3 | 4 | 5 | 6 | 7 |

| 1 | Start button | This button offers you access to all components of your Touch Panel like e.g. applications, system settings, file browser etc. |
|---|--------------------|---|
| 2 | Open applications | For every open application a button can be found in the task bar. There is no button for minimizing. The switch between the appli- cations is performed via this buttons. |
| 3 | Network connection | As soon as your Touch Panel is connected via Ethernet you can see here the Ethernet address. If there is no connection via Ethernet, the symbol is displayed crossed out. |
| 4 | Keyboard layout | If you've connected a keyboard you can choose the requested language layout via this button. |
| 5 | Time | This area shows the time that you can change via double click. |

Deployment Touch Panel

Operating system Windows® Embedded CE 6.0 Prof. > Structure

| System setting (Control Panel) | As many components of the <i>Control Panel</i> conform with the system control of Windows[®], most of the description is not necessary. The description of the control panel components relevant for operating the Touch Panel can be found in the following: Set display Via 'Start → Settings → Control Panel → Display' the dialog windows for the display properties opens. Here you can change the settings for the monitor options. Calibrate touch screen If the touch screen does not always react to a double click or not precisely recognize the position of an entry, you can call the dialog Stylus via 'Start → Settings → Control Panel'. In the register Double-Tap you can use the grid pattern to preset a double click velocity and test this on the symbol below. Click [OK] to accept the value. The calibration of the touch screens is com- |
|-----------------------------------|---|
| | accept the value. The calibration of the toden screens is completed via the register <i>Calibration</i> by following the instructions. Set Ethernet parameters The dialog field for pre-setting an Ethernet address can be found in 'Start → Settings → Network and Dial-up Connections'. The default setting is address assignment via DHCP. System properties (System) Here you receive information about the version of the current Windows® operating system, the memory load and sharing (alterations here are not accepted into the registry) and the copyright. The register <i>Device Name</i> allows you to change the device name that is shown during Ethernet communication for instance. |
| | Please note that changes are set back after PowerOFF- PowerON. To store them permanently into the registry file you have to store them explicitly. For this call 'Start → Programs → KuK_Tools → KuK Tools' [Store]. |
| Set MPI parameters | The dialog window where to configure the integrated MPI interface can be found under 'Start \rightarrow Settings \rightarrow Control Panel \rightarrow MPI Configuration'. |

| MPI/DP S | lave Confi | guration | | ok × |

| Current: | MPI(| Offline) | Ver: 1 | 1.1.1 |

HSA

Here you set the highest MPI address (highest station address). Within a MPI network the highest MPI address must be identical!

TS

With TS (this station) you set the local MPI address for the Touch Panel.

Baud Rate

Enter here the transfer velocity of your MPI net. The baud rate has to be identical for every MPI participant within the network. According to the Baud Rate the network parameters are set.

Default Net Parameters It is recommended not to alter the Default Net Parameters that are set by the baud rate.

Status

The status of the MPI interface is monitored via Status as "Offline", "Online" or "Error".

 Here made changes are also not saved after PowerOFF-PowerON. Save the data permanently in the current registry file via [Store] under 'Start → Programs
 → KuK_Tools → KuK Tools'.

3.5 Communication via ActiveSync

| Overview | ActiveSync is a communication platform developed by Microsoft especially for mobile computers to synchronize data between a mobile device and a PC via USB. Many developer tools res. SCADA project-engineering tools use ActiveSync for the data transfer. Before you can access the Touch Panel from the PC via ActiveSync you have to install it on the PC. ActiveSync is freeware and can be down- loaded from www.microsoft.de. |
|--------------|--|
| Installation | 1. Download the ActiveSync from the Microsoft website and start the file MSASYNC.EXE. |
| | 2. Start the installation with [Next]. |
| | 3. Choose an installation directory and click on [Next]. |
| | ⇒ ActiveSync is installed. |

Communication via ActiveSync

Establish connection

After the installation the dialog window "establish connection" is opened.

Start the search run with [Next]:

| et Connected | |
|---|----------|
| Checking COM Ports Please wait while Setup locates your mobile device. | ŧ |
| | S |
| Progress Looking for a mobile device Checking on COM Port 1 Checking USB | |
| | |

Install partnership for USB communication

Now you can install a "partnership" via an USB connection with the following approach:

- Connect your Touch Panel via the "Device"-USB-B jack to your PC and turn on the Touch Panel.
 - ⇒ The USB device (Touch Panel) is recognized and the dialog window "new partnership" opens.

2. Choose "yes" for fixing a partnership and push [Next].

3. In the opening window de-activate all synchronization settings and click on [Next].

| To synchronize a particular t synchronization of that inforr | ype of information, select its check box. To stop nation, clear its check box. |
|---|---|
| Mobile Device | Desktop Computer |
| ∕ ⊡ Calendar | Not Installed |
| 🗆 👰 Channels | Channel Synchronization |
| E Contacts | Not Installed |
| 🗆 🔁 Files | Synchronized Files |
| 🗆 🙆 Inbox | Microsoft Outlook |
| Pocket Access | Microsoft Databases |
| V 🗹 Tasks | Not Installed |
| | to customize what gets synchronized, click |

4. [Finish] establishes the partnership.

Now you can access the Touch Panel with ActiveSync via USB.

To keep the settings also after power on, you have to store them to the registry with 'START \rightarrow Programs \rightarrow KuK_Tools \rightarrow KuK Tools' [Store].

3.6 Integrated Server 3.6.1 General The Touch Panel has several integrated server that enable a remote Login data maintenance within a network. Some servers only allow access by means of entering User name and Password. The following login data are used standardly: User name: wince Password: vipatp **Overview** Per default the following server are integrated: ftp server (activated) http server (activated) Telnet (activated) VNC (not activated) **Phrases** Phrases that are used in the description of the server:

Integrated Server > ftp server

| Client | A client is an application that uses the service of a server within a net- work. For example, a web browser is a client because at every call of a website it sends a request to a web server and receives an answer. | |
|------------------------------------|---|--|
| Server | A server is an application that waits for the contact request of a client application and exchanges messages with it after contact start. This communication type is called Client-Server communication. | |
| Host | Computer within a network where at least one server is running. | |
| Download | Data transfer Server \rightarrow Client | |
| Upload | Data transfer Client \rightarrow Server | |
| 3.6.2 ftp server | | |
| | By means of a ftp server data between client and server can be exchanged. Here you can copy, delete or create files and directories. | |
| Conditions for ftp access | Depending on the ftp client your PC must have the following condi- tions for a ftp connection. If there are still problems with the ftp access please ask your system administrator. | |
| | Internet Explorer | |
| | ftp access possible with version 5.5 or higher activate directory view for ftp sites | |
| | For the adjustment choose in the Internet Explorer <i>'Options</i> → Internet options', register "extended" in the area "Browsing" and set the following settings: | |
| | 1. activate: "activate directory view for ftp sites" | |
| | 2. Restart the Internet Explorer. | |
| | \Rightarrow The settings are saved. | |
| Establishing a ftp con- nection | Below is explained, how to establish of a ftp connection between a Windows [®] based PC with Windows Explorer as ftp client and your Touch Panel. | |
| | Connect your Touch Panel with the network where your PC is a member via an Ethernet cable. | |
| | 2. Switch on your Touch Panel. | |

3. As soon as your Touch Panel is connected via Ethernet, you may monitor the IP address data via 🛃 in the taskbar.

| DM9CE1 | | OK × |
|------------------|---------------|---------|
| IP Information | | |
| Internet Protoco | I (TCP/IP) | |
| Address Type: | DHCP | |
| IP Address: | 172.16.135.22 | P |
| Subnet Mask: | 255.255.224.0 | |
| Default Gateway: | 172.16.128.4 | |
| | | Details |
| | | |
| Renew | | |

4. After you've confirmed the pre-settings, start your ftp client (e.g. Windows Explorer) and enter the following text into the "address bar":

ftp://wince:vipatp@IP-Adresse

⇒ In the appearing explorer window you can execute the requested file operations.

| 3.6.3 | http server | |
|--------|-------------|--|
| | | The Touch Panel has an integrated http server (web server) that allows depending on the access the administration of the Touch Panel res. of websites in the Touch Panel. The administrative access to the http server happens via Ethernet from the PC by setting the IP address of the Touch Panel with attached "Admin" type. |
| | | Using the websites you may e.g. publish online documentations for a connected PC or go online with applications on the PC. |
| Web ad | min | As web admin you have access to all functions that are required for uploading and administrating of websites on the Touch Panel. Addi- tionally you may set the access rights for user and create user groups. More detailed information about creating and administrating of websites on the Touch Panel are available in the online documen- tation of the web servers. |
| | | The login as web admin requires the following steps: |
| | | 1. Start the web browser at your PC and enter the following into the address bar: IP address/webadmin |
| | | Enter the following into the authentification: |
| | | User name: wince Password: vipatp |

Integrated Server > Telnet server

| 3.6.4 Telnet server | Telnet is a text based client-server protocol on TCP level. Using of a Telnet client like e.g. the "MS-DOS console" in your Windows [®] oper- ating system you may execute text based all file remote functions at your Panel PC like copy, delete and create files and directories. You may also start applications. Terminating an application is not possible. |
|----------------------------------|---|
| Establishing a Telnet connection | The establishing of a Telnet connection is password protected and has the following approach: Start a Telnet client like for example "MS-DOS console" at your PC and enter the following into the address bar: telnet IP address. |
| | When the connection is established, the Panel PC asks for the user name and the password. |
| | 🖾 Eingabeaufforderung - telnet 172.16.135.22 |
| | Welcome to the Windows CE Telnet Service on VIPATP |
| | 2. Enter the following: |
| | Login: wince |
| | Password: vipatp (entry is hidden) |
| | ⇒ After entering valid user data a command line for entries appears: |
| | Eingabeaufforderung - telnet 172.16.135.22 |
| | Welcome to the Windows CE Telnet Service on VIPATP |
| | login: wince Password: |
| | Pocket CMD v 5.0 |
| | By entering \texttt{Exit} res. closing the window you may terminate the |
| | Telnet connection at any time. |

Commands

After establishment of a Telnet connection the Panel PC provides you with commands. A list of possible commands with a short description is available via the command help. By beginning with "help" before a command you receive help to this command.

Integrated Server > VNC server

| > help | | | |
|--|-------|--|--|
| The followi | | mmands are available: | |
| ATT | RĪB | Set/display file attributes. | |
| CAL | L | Call batch script. | |
| CD | | Change directory. | |
| CHD | IR | Same as CD. | |
| CLS | | Clear the screen. | |
| COP | Y | Copy files. | |
| DAT | | Display/set system date. | |
| DEL | | Delete a file. | |
| DIR | 6 S | Print contents of a directory. | |
| ECH | 0 | Echo output on the screen or change echoing parameters. | |
| ERA | SE | Same as DEL. | |
| EXI | T | Exit command interpreter. | |
| HEL | P | Print help for command interpreter or individual commands. | |
| GOT | | Transfer control to a label in batch processing. | |
| IF | | Conditionally execute a command. | |
| MD | | Create a directory. | |
| MKD | IR | Same as MD. | |
| MOU | E | Move/rename files. | |
| PAT | H | Alias for SET PATH. | |
| PAU | SE | Suspend execution of a batch file. | |
| PRO | MPT | Reconfigure system prompt. | |
| PWD | | Print current working directory. | |
| RD | | Remove directory. | |
| REM | 1 2 | Record comments in batch file. | |
| BEN | | Change file name. | |
| REN | | Same as REN. | |
| RMD | IR | Same as RD. | |
| SET | | Set or list environment variables. | |
| SHI | FT | Shift arguments of a batch file. | |
| STA | RT | Start detached process. | |
| TIM | | Display/change system time. | |
| TIT | | Set the window title for a CMD.EXE session. | |
| TYP | | Output contents of a file or files to the screen. | |
| se HELP [c | omman | d nâme] to display extended help for given command, or | |

| command inv | | tions, 1/0 redirection or CMD parameters. | |
| > _ | | | |
| 28 S () () () () () () () () () (| | | |
| | | | |

3.6.5 VNC server

The Touch Panel has an integrated VNC server (virtual network control) that allows the total control of the Touch Panel with a PC via network. For this, a window displays the current Touch Panel content for remote control. Operation is performed via PC keyboard and mouse. Condition for the VNC communication is, that the VNC server is started on the Touch Panel and a VNC client on the PC. You may download a VNC client as freeware from internet.

Due to software reasons VIPA does not support the VNC server function!

| Establishing a VNC con- nection | With "Autostart" you can select the automatic startup of the VNC server, via the Startup-Manager. |
|------------------------------------|--|
| | The VNC connection establishment has the following approach: |
| | 1. 🕟 Click on 🄝 and open the "Windows" directory. |
| | 2. Start the VNC server by executing the file winvnc.exe. To show the server has been started, the symbol Efon vnc appears in the task bar. You may also start the VNC server at the Touch Panel via a Telnet connection by entering the command winvnc in the command console with an active Telnet connection. |
| | 2 Now start the V/NO slight manifestory and so and so DO |

3. Now start the VNC client vncviewer.exe on your PC.

Access to the network resources

| Connection details | | × |
|---|---|-------------------|
| VNC server: | 172.16.135.22 ▼ OK | |
| | Use host:display e.g. snoopy:2 (Display defaults to 0 if not give | Cancel Options |
| Connection Options | | × |
| Preferred encoding Hextile CoRRE RRE Raw Allow CopyRect encoding Misc Request shared s Deiconify on Bell Disable clipboard | encoding | |

- **4.** Click on [Options] and deactivate the field "Emulate 3 Buttons..." like shown at *Mouse*.
- **5.** Enter the IP address of the Touch Panel at *VNC server*. Click on [OK] and enter the password vipatp. You can change the password over the configuration file, for this execute vncconfig.exe. Now a VNC connection is established and the screen content of the Touch Panel is monitored within a window.

Closing the VNC window terminates the VNC connection, the server keeps running.

3.7 Access to the network resources

| Overview | The Touch Panel allows you to access shared resources in a Micro- soft network like drives and printer. Here you may assign existing public directories or printer in the network to local directories or printer in the Touch Panel. |
|-------------------------|--|
| | Condition for this is that you are logged in to the network with your user name and password. The assignment of a network resource is performed in the Touch Panel via the command console "Command Prompt". Start the command console with 'START \rightarrow Programs \rightarrow Command Prompt'. |
| | The access to the network resource is performed with the commands <i>Net view</i> and <i>Net use</i> . |
| List released resources | Shared resources of a network PC can be listed by the command: <pre>\> net view PC-Name</pre> |

For example net view testserver lists all shared resources of the network PC "test server". To test the physical connection a PING to the IP address of the network PC can be executed if there are problems while contacting the network PC.

| | problems while contacting the network PC. | | |
|------------------------------|--|--|--|
| | <pre>\> net view testserver Shared resources on \\testserver:</pre> | | |
| | Share name Type Used as Comment | | |
| | ArchivDisc(null)Process dataKyoEDVPrint(null)Kyocera FS-680 PrinterCommand completed successfully\> | | |
| Connect net drive | The connection of a local name at the Touch Panel with a shared | | |
| | drive of the network PC happens with the following approach: 1. Factor between the following in the command prompt: \> net use | | |
| | local_name \\network drive /user:User name | | |
| | 2. Enter <i>user name, password</i> and where app. <i>user group</i> . | | |
| | After successful login the following message appears: 'Successfully mapped to network name'. | | |
| | The connected network drive is then available on the Touch Panel with the <i>local_name</i> via <i>My Device</i> under <i>Network</i> . | | |
| Example: | Local_Name: data, network drive: testserver\archive, User- name:guest | | |
| | <pre>Input: \> net use data \\testserver\archiv / user:guest</pre> | | |
| | The connected network drive is then available via \network\data at the Touch Panel. | | |
| Configure network printer | The configuration of a network printer happens with the following approach: | | |
| | 1. Enter this command into the command prompt: \> net use printer name network printer | | |
| | Example: | | |
| | Printer name: Printer, network printer: \\testserver\printer | | |
| | <pre>Entry: \> net use printer \\testserver\printer</pre> | | |
| | 2. Enter user name, password and if necessary user group. | | |
| | After the successful login the following message appears | | |
| | Successfully mapped to network printer | | |
| | The printer can now be accessed as "network\printer". | | |
| Test print | For example you can print the content of the current directory using \> dir > network\printer. | | |

Access to the network resources

List network connections

The listing command for all network connections of your Touch Panel is \> net use

| 2 | 1- | nec | uъ |
|---|----|-----|----|
| | | | |
| | | | |

| <pre>\> net use Connected reso</pre> | purces: | |
|--|--------------------------------------|---|
| Status | Local Name | Remote Name |
| Connected Connected Command comple | data printer eted successfully | <pre>\\testserver\archiv \\testserver\printer</pre> |

Terminate network connections

You can terminate already assigned network resources via

\> net use local name /d

Example: \> net use data /d deletes the network connection to
the drive "archive" of "test server".

To save the settings also after power on, you have to store them to the registry with 'START \rightarrow Programs \rightarrow KuK_Tools \rightarrow KuK Tools' [Store].

4 Installation Guidelines

| 4.1 Basic rules for the EMC-equitable assembly of installations | | | |
|---|--|--|--|
| General | The installation guidelines contain information about the interference free deployment of a PLC system. There is the description of the ways, interference may occur in your PLC, how you can make sure the electromagnetic compatibility (EMC), and how you manage the isolation. | | |
| What does EMC mean? | Electromagnetic compatibility (EMC) means the ability of an electrical device, to function error free in an electromagnetic environment without being interfered respectively without interfering the environment. | | |
| | The components of VIPA are developed for the deployment in indus- trial environments and meets high demands on the EMC. Neverthe- less you should project an EMC planning before installing the compo- nents and take conceivable interference causes into account. | | |
| Possible interference causes | Electromagnetic interferences may interfere your control via different ways: | | |
| | Electromagnetic fields (RF coupling) Magnetic fields with power frequency Bus system Power supply Protected earth conductor | | |
| | Depending on the spreading medium (lead bound or lead free) and the distance to the interference cause, interferences to your control occur by means of different coupling mechanisms. | | |
| | There are: | | |
| | galvanic coupling capacitive coupling inductive coupling radiant coupling | | |

Basic rules for the EMC-equitable assembly of installations

Coupling mechanisms and interference sources

The following table shows the four different coupling mechanisms, their causes and possible interference sources.

| Coupling mechanism | Cause | Typical source |
|---|---|---|
| Galvanic coupling Disruptor galvanic coupling line Automation System | Galvanic or metallic coupling always occurs, when two cur- rent circuits have a common line. | Pulsed devices (Net influence from transducers and foreign net devices) Starting motors Different potential of component cubicles with common current supply Static discharges |
| Capacitate coupling Disruptor capacitive coupling line Automation System | Capacitate or electric coupling occurs between conductors with different potential. The coupling is proportionate to the temporal change of the voltage. | Interference through parallel signal lines Static discharge of the personnel Contactors |
| Inductive coupling Disruptor inductive coupling line Automation System | Inductive or magnetic coupling occurs between two current active line loops. The magnetic flows associated with the cur- rents induct interference vol- tages. The coupling is propor- tional to the time related change of the current. | Transducers, motors, electric welding devices Parallel net cables Cables with toggled currents Signal cable with high frequency Unused coils |
| Radiate power coupling Disruptor radiated coupling line Automation System | One talks of radiate power cou- pling, when an electromagnetic wave meets a line circuit. The hit of the wave inducts currents and voltages. | Sender in the neighbour- hood (e.g. walkie-talkie) Sparking lines (sparking plugs, collector of electric motors, welding devices) |

| Basic rules for EMC | In the most times it is enough to take care of some elementary rules to guarantee the EMC. Please regard the following basic rules when installing your PLC. | |
|---|---|--|
| | Take care of a correct area-wide grounding of the inactive metal parts when installing your components. | |
| | Install a central connection between the ground and the pro- tected earth conductor system. | |
| | Connect all inactive metal extensive and impedance-low. Please try not to use aluminium parts. Aluminium is easily oxidizing and is therefore less suitable for grounding. | |
| | When cabling, take care of the correct line routing. Organize your cabling in line groups (high voltage, current | |
| | supply, signal and data lines). Always lay your high voltage lines and signal respectively data | |
| | lines in separate channels or bundles. | |
| | Route the signal and data lines as near as possible beside ground areas (e.g. suspension bars, metal rails, tin cabinet). Proof the correct fixing of the lead isolation. | |
| | Data lines must be laid isolated. | |
| | Analog lines must be laid isolated. When transmitting signals with small amplitudes the one sided laying of the isolation may be favourable. | |
| | Lay the line isolation extensively on an isolation/protected earth conductor rail directly after the cabinet entry and fix the isolation with cable clamps. | |
| | Make sure that the isolation/protected earth conductor rail is connected impedance-low with the cabinet. | |
| | Use metallic or metallised plug cases for isolated data lines. | |
| | In special use cases you should appoint special EMC actions. Consider to wire all inductivities with erase links. | |
| | Please consider luminescent lamps can influence signal lines. | |
| | Create a homogeneous reference potential and ground all elec- trical operating supplies when possible. | |
| | Please take care for the targeted employment of the grounding actions. The grounding of the PLC serves for protection and functionality activity. | |
| | Connect installation parts and cabinets with your PLC in star topology with the isolation/protected earth conductor system. So you avoid ground loops. | |
| | If there are potential differences between installation parts and cabinets, lay sufficiently dimensioned potential compensation lines. | |
| | | |
| 4.2 EMC-equitable as | sembly | |
| | Mostly, measures for suppressing interference voltages are only taken, when the control is already in commission and the perfect receive of a wanted signal is disturbed. Causes for such interferen- ce's are in the most cases inadequate reference potentials, coming from mistakes at the device assembly and installation. | |
| Guidelines for assem- bling and grounding of inactive metal parts | When assembling the devices, you have to ensure the large-surface grounding of the inactive metal parts. A correctly done grounding sup- ports an unambiguous reference potential for the control and reduces the impact of coupled interferences. | |

EMC-equitable cabling

Grounding means the conducting connection of all inactive metal parts. The sum of all interconnected inactive parts is called ground.

Inactive parts are all conductive parts electrically separated from all active parts by means of a basic isolation and that may only get voltage in case of an error.

The ground must not adopt dangerous contact voltage even in case of an error. Thus you have to connect the ground with the protected earth conductor. To avoid ground loops, local distant ground constructions (cubicles, construction and machine parts) have to be connected with the protected earth conductor system in star-topology.

Please regard at grounding:

- Connect the inactive metal parts as carefully as the active ones.
- Take care of impedance-low metal-metal-connections, e.g. with large-surface and well conductive contacts.
- If you include coated or anodized metal parts in the grounding, you have to come through the isolating protection layers. For this you may use special contact washers or remove the isolation layer.
- Protect the connection points from corrosion, e.g. with grease.
- Moveable grounding parts (e.g. cubicle doors) have to be connected via flexible ground strips. The ground strips should be short and have a large surface, because the surface is decisive for the diversion of high frequency interferences.

4.3 EMC-equitable cabling

Line routing Content of this section is the line routing of bus, signal and supply lines. Object of the line routing is to suppress the "slurring" at parallel lines.

Line routing inside and For an EMC-equitable routing of the lines it is convenient to divide the cables in different groups and install each group itself:

Group A

- screened bus and data lines
- screened analog lines
- unshielded lines for direct voltage $\leq 60V$
- unshielded lines for alternating voltage ≤25V
- Coaxial cables for monitors

Group B

- unshielded lines for direct voltage >60V and $\leq 400V$
- unshielded lines for alternating voltage >25V and ≤400V

Group C

- unshielded lines for direct and alternating voltage >400V
- Group D
- Lines for H1 respectively TCP/IP

Combination of groups

roups Following the table you may see the conditions for the cabling of the line groups by combining the single groups:

EMC-equitable cabling

| | Group A | Group B | Group C | Group D |
|---------|---------|---------|---------|---------|
| Group A | [1] | [2] | [3] | [4] |
| Group B | [2] | [1] | [3] | [4] |
| Group C | [3] | [3] | [1] | [4] |
| Group D | [4] | [4] | [4] | [1] |

- [1] The lines may be installed in common bundles or cable trusses.
- [2] The lines have to be installed in different bundles or cable trusses (without min. distance).
- [3] The lines have to be installed in different bundles or cable trusses inside of cubicles and outside of the cubicle but inside the building in separated cable trusses with a min. distance of 10cm.
- [4] The lines have to be installed in different bundles or cable trusses with a min. distance of 50cm.

Wherever possible, exterior cabling should be installed on metallic cable trays. A galvanic connection must be provided for joints between cable trays. You must abide by the applicable lightning protection and grounding regulations when installing exterior cables.

Line routing outside of buildings

Lightning protection

CAUTION!

Where cables and signal lines for PLC equipment are installed outside of buildings, the conditions for internal and external lightning protection must be satisfied.

- Exterior lines should either be installed in metallic conduit pipes that is grounded on both ends or in steelreinforced concrete cable trunks with continuously connected reinforcing.
- Signal lines should be protected against overvoltage by varistors or by lightning arrester filled with rare gas.
- Install these protective elements at the location where the cables enter the building.

Any lightning protection system must be based on an individual assessment of the entire plant. For questions please contact VIPA GmbH. EMC-equitable cabling

| Equipotential bonding | Potential differences can occur between different sections when con- trollers and peripheral equipment are connected by means of non-iso- lated connections or the screens of screened cables are connected at both ends and grounded on different sections of the plant. One reason for a potential difference can be that different sections of the plant are powered from different power sources. These potential dif- ferences must be reduced by means of equipotential bonding conduc- tors to ensure that the electronic equipment employed on the plant operates properly. |
|---------------------------------|---|
| Rules for equipotential bonding | The lower the impedance of the equipotential bonding conductor, the higher the effectiveness of potential equalization. The impedance of the equipotential bonding conductor must not exceed 10% of the impedance of the screen where screened signal lines are connected between the different sections of the plant and the screening is connected to ground/neutral on both sides. The cross-sectional area of the equipotential bonding conductor must be calculated to carry the maximum equalization current. The following cross-sections have been successfully employed: 16mm² Cu for equipotential bonding conductors up to 200m 25mm² Cu equipotential bonding conductors exceeding 200m. Use copper or galvanized steel for equipotential bonding conductors. These must be connected to ground/neutral by means of large-surface connections that are protected from corrosion. The equipotential bonding conductor should be installed in such a manner that it includes the smallest surface between the bonding conductor and the signal lines. |
| Screening of lines and cables | Screening is one method commonly used to reduce (attenuate) the interference pick-up from magnetic, electrical or electromagnetic fields. Interference on screens is conducted to ground by the conductive connection between the screen and the screening rain/enclosure. To avoid interference from these currents it is very important that the neutral connection is a low-impedance connection. You should only use cables that are provided with a braided screen. The degree of screening should be more than 80%. Avoid cables with foil-type screens as the foil can be easily dam- |
| One-sided grounding of | aged by tension and pressure at the point of attachment; this can result in reduced effectiveness of the screening action. As a rule you should always ground the screens of cables on both ends. This is the only way in which you can ensure that high frequency interference is attenuated properly. |
| screens | one side only. However, this will only attenuate the lowest frequencies. The one-sided grounding of screens may provide advantages when: It is not possible to install an equipotential bonding conductor Analogue signals (a few mV or mA) must be transmitted Foil-type screening (static screening) is employed. |

You should always use metallic or metallised covers for serial data lines. Connect the screen of the data line to the cover. Do **not** connect the screen to PIN 1 of the connector! In case of stationary operations it is recommended that the remove the insulation from the screened cable without cutting the screen and to attach this point to the screening/neutral rail.

Potential differences can give rise to an equalization current via the screen connected between the two ground connections. In this case you must install an additional equipotential bonding conductor.

Connecting the screen

Please observe the following points when you handle the screens:

- Use only metallic cable clamps when connecting the screening of cables. These clamps must provide a good electrical contact and a large-surface connection to the screen.
- Attach the screens to the screening rail directly at the point where the cables enter the enclosure. The screening conductor must be continued to the module without interruption, however, it must not be connected to the module!

4.4 Special precautions providing high noise immunity

Inductors require snubber networks Inductors controlled by your programmable controller (e.g. contactors and relays) do not normally require additional snubber networks or suppressors as the respective modules have been provided with the required components.

Equipotential bonding Snubber networks must only be connected to inductors when output circuits can be disabled by means of additional contacts (e.g. relay contacts). In this case the integrated suppressors on the module are also disabled. You can connect diodes to suppress back-emc, varistors or RC-networks to the inductors.

| Connections of DC-activated inductors | | Connections of AC-activated inductors | |
|--|-----------------|---------------------------------------|-----------------------|
| using a diode | using a Z-diode | using a varistor | using RC-net- work |
| | | | |

Power outlet for PGs Every cubicle must be provided with a power outlet for the PU. These outlets must be wired to the distribution system, which is also used to connect the neutral conductor for the cubicle.

Cubicle illumination The cubicle illumination should consist of incandescent lights, e.g. LINESTRA-lamps. Avoid using fluorescent lamps as these lamps can cause interference. If you can not avoid using fluorescent lamps you should implement the steps outlined in the following figure.

Suppression of fluorescent lamps in cubicles

- 1 Fluorescent lamp
- 2 Screen above the lamp
- 3 Screened cable
- 4 Switch with metallic cover
- 5 Line filter or screened power cable

Checklist for the EMC-compliant installation of controllers

4.5 Checklist for the EMC-compliant installation of controllers

| 4.5 Oneckinst for the Emo-compliant instantion of conti | |
|---|-----------------|
| EMV-measures | Space for Notes |
| Connection of the inactive parts | |
| You should take special care to check the connections of: Module racks Frames Screen and protected earth conductor | |
| Are all the inactive metal parts interconnected by means of large-sur- face and low-impedance connections? | |
| Has a proper connection been installed with respect to the ground/pro- tected earth conductor system? | |
| Has the isolation been removed from varnished and anodized surfaces or have these connections been fitted with special contact washer? | |
| Have the connection been protected from corrosion, e.g. by means of grease? | |
| Have doors been grounded by means of grounding straps connected to the body of the cubicle? | |
| Cable routing | |
| Cabling divided into groups? | |
| Power cables (230 400V) and signal lines installed in separate channels or bunches? | |
| Potential compensating | |
| When installing the equipment at separate locations, check the instal- lation of the potential compensating line. | |
| Cable screen | |
| All covers of plugs are metallic? | |
| All analog and data lines installed screened? | |
| Line screens attached to the screening or the protected earth con- ductor? | |
| Have the screens been connected by means of large-surface and low-impedance cable clamps? | |
| Cable screens grounded both-sided where possible? | |
| Inductors | |
| Have the coils of contactors controlled by means of contacts been connected to snubber networks? | |
